Personal Qualities

Analytical, detail-oriented, team player, self-motivated, adaptable, problem-solver

Key Skills

Language: English (B2)
Programming Languages: C#, C++, C, Python, JavaScript, HTML, CSS
Frameworks & Technologies: .NET Core, Docker, Quartz, SharePoint, Power Platform
Databases: PostgreSQL, MSSQL, MySQL, Redis
Communication Protocols: HTTP, WebSocket, SignalR, RabbitMQ
Development Environments: Visual Studio, VS Code, Git, Google Colab
Auxiliary Tools: AutoMapper, FluentValidation, Swagger, Postman
Deployment: Docker Compose, Windows Server, IIS, Task Scheduler
Architectures & Patterns: Clean Architecture, Repository Pattern, CQRS, SOLID
Areas: API and MVC applications, console and UI development, artificial intelligence, LLM, deep learning
Driver's Licence: A2, B

Interests

Artificial intelligence, cycling, system architecture, following automotive and technology developments, sports, watching movies/series, exploring new places, spending time with friends.

Profile

I am a computer engineer specializing in .NET Core and software architectures, and a graduate of Eskişehir Osmangazi University. In real projects I have actively used technologies such as .NET Core, Web API, PostgreSQL, Redis, Docker, SignalR, RabbitMQ, Quartz and Clean Architecture. I have applied agile methodologies like Scrum and Kanban in software development processes. I am a solution-oriented engineer who works well in teams and strives for continuous improvement. My goal is to develop sustainable, testable and scalable systems.

Experience

BosphorusISS – Software Development Intern (07/2025): Developed an educational task-management system. Designed a layered architecture using .NET Core, PostgreSQL, Redis, Docker, RabbitMQ, Quartz, SignalR and Clean Architecture principles.

SOVOS – R&D Product Development Intern (12/2024 – 04/2025): Took an active role in enterprise software development using .NET and Angular technologies.

TCM Bilişim – Software Development Intern (07/2024 – 12/2024): Worked on C#, ASP.NET MVC, API development, MSSQL and PowerAutomate. Conducted application testing and integration using SwaggerUI, Postman and SharePoint.

TÜBİTAK – 2247-C STAR Researcher (02/2024 – 12/2024): In an AI-based frequency allocation project for 6G, worked with models such as ANN, GB and RF. Performed dataset generation, model training and prepared articles and patents.

Mavera Technology Team – Team Lead & Member(12/23– 01/25): As part of TEKNOFEST, developed a vehicle control system (AKS) and telemetry systems for an electric vehicle. Managed API, server and real-time data processing. Utilized .NET Web API, LoRa, GSM, PyQt and STM32 technologies. Finalist in the 2024 TÜBİTAK Efficiency Challenge.

Education

42 Ecole	2025 - 2027
Eskişehir Osmangazi University	2020 - 2025
BSc in Computer Engineering GPA: 3.09	
Özdemir Sabancı Anatolian High School	2016 - 2020
